

Conlan Fingerprint Reader (Art.no. 460180)

The future belongs to bio-keys, this is what we strongly believe.

We are pleased to fulfill your demands with bio-key based technology in access control.

We developed a solution that uses the given identification of the finger to make life comfortable and safe.

It is flexible, easy handling and adaptable to your specific needs.

It is for unlimited amount of users in connection with a Keypad.

It works in almost any meteorological conditions.

It has an user-friendly software attached.

It makes identification as well as verification.

Buy reliable Conlan Fingerprint reader at a price any business can afford.

Conlan Fingerprint Reader and Keypad for unlimited amount of users

The solution comes from big public institutions that ask for cost effective and safe access control systems. An university can easily have 10.000 users that need to have codes or cards for gaining access to different offices. Whatever the price per piece, cards represent an expensive solution, due to the big amount required. Codes, in this case, cause problems too, because either long code is difficult to remember, or four-digit codes are not enough.

Then it comes to the system capable of handling this number of users. Conlan performed a simpler and efficient solution: verification for unlimited number of users. Information is stored in just one computer, and verifications are made using the user's PIN number and his/her own finger. Each finger data take no more than 1Kb. In one Gb hard drive space you can keep one million users, but computers today have from 40Gb up!

A Fingerprint Reader, a Keypad, one RS232-RS485 converter and one PC running Conlan Fingerprint Unlimited Software under Windows 98/2000/NT/XP is your solution for complex cases.
